

LIGHTWARE & P5

INTEGRATING TAURUS WITH P5'S IP BASED FUTURENOW MODULES USING LARA

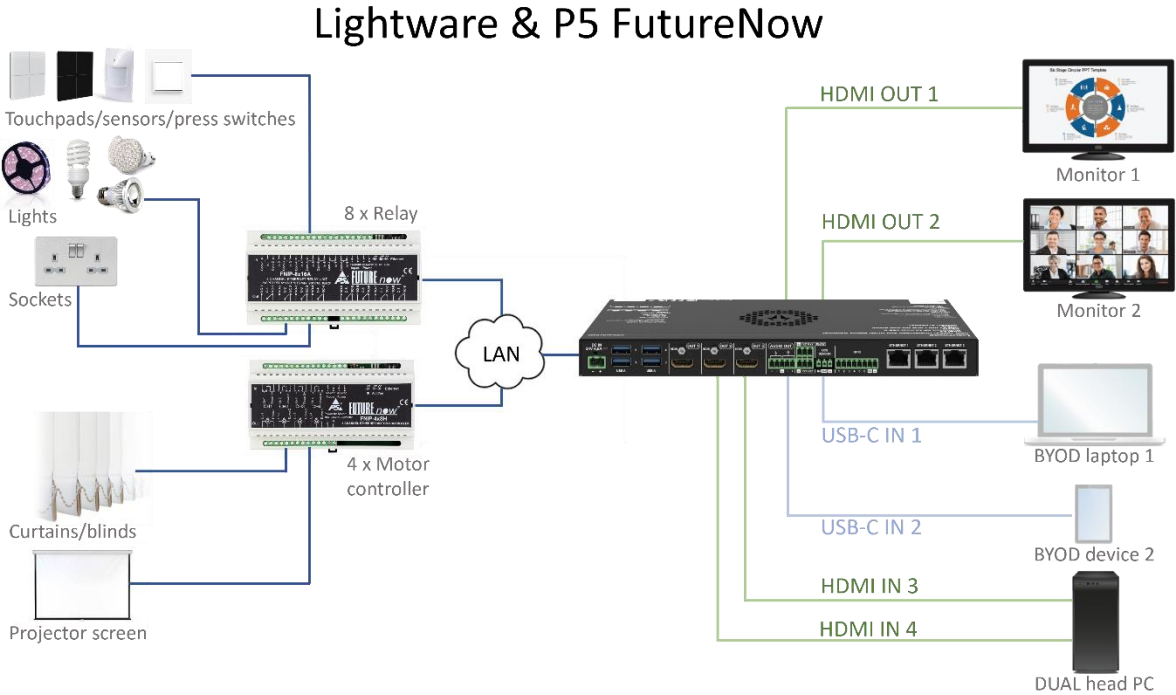

Lightware and P5 have developed drivers for Lightware Advanced Room Automation (LARA) to offer the ultimate Room Control Solution.

Taurus UCX and TPX are universal matrix switchers designed to address the common challenges of meeting rooms and collaboration environments. Taurus stands as a unique connectivity platform, enabling users to effortlessly share their content, switch hosts, and manage meeting rooms with ease and intuitiveness.

LARA is an automation platform running on Taurus UCX, specifically designed for system integrators to seamlessly and effectively support people's virtual or in-person collaboration needs.

P5's product line encompasses DIN Rail mountable, multi-channel switches, dimmers, window covering and HVAC control modules featuring Ethernet connectivity. Developed and manufactured in Europe, all P5 products carry the CE mark.

With the seamless integration of P5 modules, Taurus UCX can now effectively control any type and number of lights, motorized window coverings, and projector screens over the LAN.

Main Features of P5 products

- Simple installation and configuration
- Flexible, modular and scalable system, can be used for small or large projects
- Lighting control, motorized screen control and general automation
- Standalone operation via local inputs. P5 Touchpads or any 3rd party momentary switches can be used for manual control
- Sensor based lighting control
- Seamless integration with LARA
